

Migrating to the cloud is easy if you do it right.

With Stormit migration to AWS is quick and secure without undue business interruption.

Why choose Stormit?

- 01** **We're a nimble and flexible team** with strong customer service.
- 02** **You work directly with AWS experts.** That speeds things up, dramatically.
- 03** **We're not focused on upselling.** We prioritize what's right for your business and what you actually need.
- 04** **Some of our experts are former AWS employees,** bringing insider knowledge and expertise.

Why migrate to AWS with Stormit?

Lower Risks

An experienced team of AWS-certified professionals ensures the entire migration process is carried out to the highest standards.

Cost Optimization

We'll assess your current resources and build a right-sized and optimized cost projection for running applications in AWS.

Faster time to Business Results

We simplify each step of the process, reducing complexity. This helps accelerate your migrations by reducing the time to realize the value of your cloud migration.

Migration flow with Stormit

01 Assess

We assess your organization's current readiness for operating in the cloud, we help identify the desired business outcomes and develop the business case for migration.

02 Plan

We create a migration plan and refine your business case, addressing gaps in your organization's readiness, focusing on building your baseline environment (the "landing zone"), driving operational readiness, and developing cloud skills.

03 Design

Each application is designed. For many applications the best approach is to rapidly move to the cloud and then re-architect in AWS. We help you redesign your old legacy systems based on cloud-native principles and enable you to leverage the cloud. We create a cutover plan for the next phase.

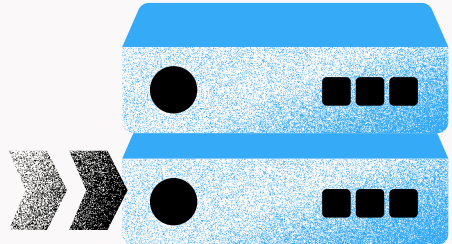

04 Migrate

In the last phase, each application is migrated and validated. While migrating to AWS, you iterate on your new foundation, turn off old systems, and constantly evolve toward a modern operating model - an agile set of people, processes, and technology that improves as you migrate more applications.
